

Stan's solution to an equation is shown below.

1.

Given:  $n + 8(n + 20) = 110$

Step 1:  $n + 8n + 20 = 110$

Step 2:  $9n + 20 = 110$

Step 3:  $9n = 110 - 20$

Step 4:  $9n = 90$

Step 5:  $\frac{9n}{9} = \frac{90}{9}$

Step 6:  $n = 10$

Which statement about Stan's solution is true?

- A Stan's solution is correct.
- B Stan made a mistake in Step 1.
- C Stan made a mistake in Step 3.
- D Stan made a mistake in Step 5.

2. Some ordered pairs for a linear function of  $x$  are given in the table below.

$x$	$y$
0	-1
2	3
4	7
6	11

Which of the following equations was used to generate the table above?

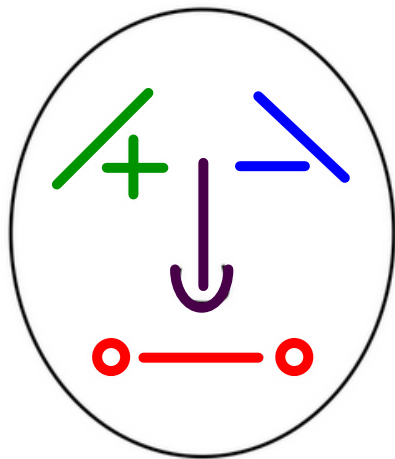

- A  $y = 2x + 1$
- B  $y = 2x - 1$
- C  $y = 3x - 2$
- D  $y = 4x - 3$

$$y = mx + b$$

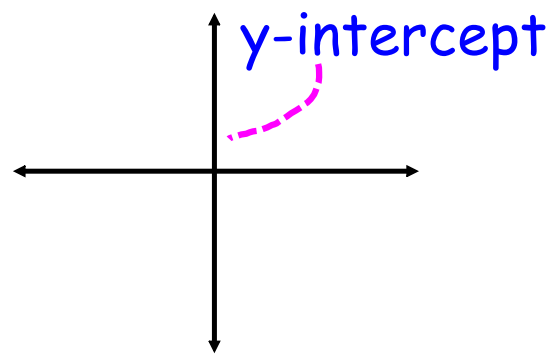

$m$  Rate of change or Slope

$b$  Flat Fee or Initial Rate or Y-Intercept

The Four Different Types of Slopes for Directions			
			
Positive Slope Increasing	Negative Slope Decreasing	Zero Slope Horizontal Line	Undefined Slope Vertical Line

**MR. SLOPE GUY**

The **y-intercept** is easy to see (it stays away from the x)...but sometimes you have to find the **SLOPE**.

You might only have two points to work from.

$(3, 5)(8, 2)$

You might have to identify it from the equation.

$$y = \frac{1}{4}x + 3$$

You might have to find it on a graph.

You might have to find it on a table.

x	y
-5	15
-4	13
-3	11
-2	9
-1	7
0	5
1	3
2	1
3	-1
4	-3

## Ordered Pair

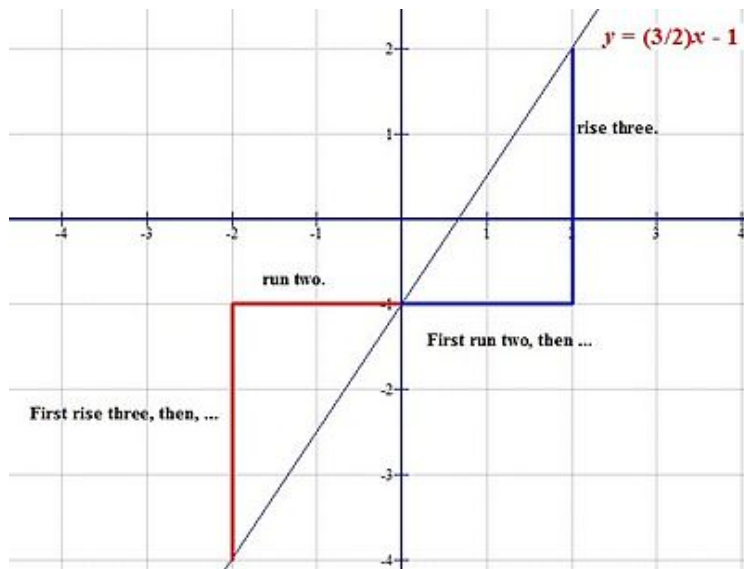

$(1, 5)$   $(7, 9)$

$(2, -3)$   $(-6, 8)$

## On a Graph

The slope of a line is the ratio of the change in y over the change in x....

$$\text{slope} = \frac{\text{rise } y \uparrow}{\text{run } x \rightarrow}$$

<http://nrich.maths.org/content/id/4901/circleAngles.swf>

On a table

$$\text{slope} = \frac{\text{rise } y \uparrow}{\text{run } x \rightarrow}$$

**PHYSICAL SCIENCE** The table below shows the relationship between the number of seconds  $y$  it takes to hear the thunder after a lightning strike and the distance  $x$  you are from the lightning.

Distance ( $x$ )	0	1	2	3	4	5
Seconds ( $y$ )	0	5	10	15	20	25

Cars Washed	
Number	Money (\$)
5	40
10	80
15	120
20	160

## As an Equation

$$y = 3x - 8$$

$$y = 9 - \frac{2}{3}x$$

$$y = 6$$

$$x = 4$$

## Ordered Pair

1. (2,5) (4, 6)      2. (-3, 2) (8, -4)

## Graph

**Slope**  
Rise/Run

## Table

6.

Temperature (°F)	54	57	60	63
Time	6 A.M.	8 A.M.	10 A.M.	12 P.M.

7.

Boxes ( $x$ )	3	5	7	9
Packs ( $y$ )	24	40	56	72

## Equation $y = mx + b$

8.  $y = 2x - 8$

9.  $y = -6 - 1/2x$

10.  $x = -4$

11.  $y = 9$

Ordered Pair

KEY

Graph

1. (2,5) (4, 6)

$\frac{1}{2}$

2. (-3, 2) (8, -4)

$-\frac{6}{11}$

**Slope**  
Rise/Run

Table

Equation  $y = mx + b$

6.

Temperature (°F)	54	57	60	63
Time	6 A.M.	8 A.M.	10 A.M.	12 P.M.

$\frac{2}{3}$

8.  $y = 2x - 8$     2

9.  $y = -6 - \frac{1}{2}x$      $-\frac{1}{2}$

7.

Boxes (x)	3	5	7	9
Packs (y)	24	40	56	72

$\frac{16}{2} = 8$

10.  $x = -4$     undefined

11.  $y = 9$     zero
